

Health Information Technology (HITHI and HITPA)

Health Information Technology involves the exchange of health information in an electronic environment. Widespread use of information technology within the health care industry will improve the quality of health care, prevent medical errors, reduce health care costs, increase administrative efficiencies, decrease paperwork, and expand access to affordable health care.

This program at Cincinnati State, which is offered through collaboration of the Center for Innovative Technologies and the Health and Public Safety Division, prepares students for important roles in varied healthcare settings. Graduates may take on responsibilities such as:

- Implementing and managing systems for electronic medical records and patient health records.
- Designing and developing tools and systems to support clinical decision making and research.
- Safeguarding the security of patient records in compliance with privacy laws and ethical issues related to the sharing of medical data and patient data.
- Developing standards for the exchange and interoperability of medical data, promoting meaningful use of medical records and data.
- Selecting and implementing health information systems to provide affordable quality healthcare.

The HIT program offers two majors.

Healthcare Informatics Major (HITHI)

Students in the Healthcare Informatics major gain skills needed to assist organizations with meaningful and efficient use of healthcare data by incorporating information technologies and information management techniques. Graduates earn an Associate of Applied Science degree and have the knowledge and skills required to collect, manage, use, and share information to support delivery of healthcare services and to promote healthy living.

Healthcare Programming and Systems Analysis Major (HITPA)

Students in the Healthcare Programming and Systems Analysis major gain the knowledge and skills required to fulfill an essential information technology role in healthcare, either as a developer who designs, implements, and maintains health-based software applications, or as an analyst supporting current healthcare-related applications. Graduates earn an Associate of Applied Science degree. Coursework covers healthcare fundamentals as well as IT professional skills in systems analysis, software development, database design, and core technical areas including .NET, Java, HL7, SQL, and SQL Server.
